PROFESSIONAL SUMMARY

Frontend-focused software engineer and Computer Science student specializing in React, Next.js, and React Native. Skilled in shipping production-ready applications, managing complex UI state, and architecting secure backend integrations — with a track record of writing clean, maintainable code for real-time client-server systems and complex API data flows.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, HTML5, CSS3

Frontend & Mobile: React, Next.js, Vue 3, React Native, Expo, Tailwind CSS

Backend & Databases: Node.js, Express.js, PostgreSQL, MongoDB, Prisma

Tools & Architecture: Git, Docker, WebSockets, REST APIs, Google Cloud Run

ENGINEERING EXPERIENCE

Software Engineer — *Kablux (Ride-Sharing Application)*

- Architected the frontend mobile interface for a ride-sharing app with complex, real-time data requirements.
- Integrated WebSockets for live location tracking, managing asynchronous data streams between rider and driver.
- Resolved state-synchronization issues to keep live route updates accurate and free of client-server drift.

Frontend Developer — *Veil — Payment & Payroll Solution*

- Led frontend architecture for a secure payment and automated payroll system built on privacy-focused decentralized protocols.
- Managed complex, asynchronous client-backend data flow, ensuring reliable state sync for financial transactions.
- Built responsive dashboards giving SMEs real-time visibility into payment metrics and user data.

Frontend Developer — *LasuLearn — Production E-Learning Platform*

- Collaborated with a development team to build and maintain a production e-learning platform serving nearly 1,000 active users.
- Shipped the platform's companion mobile app, maintaining full feature parity across web and mobile.
- Integrated RESTful APIs for dynamic course data, user authentication, and secure data management.

EDUCATION

Bachelor of Science, Computer Science

University of Uyo — Uyo, Akwa Ibom, Nigeria | Expected Graduation: 2027
